Farnama

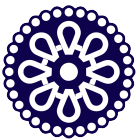

Software Engineering Course Project — Proposal Presentation

Zahra Mirzaei Amirmahdi Azizi Amirhossein Alian

Kermanshah University of Technology

Instructor: Dr. Sudabeh Mohammadi

November 7, 2026

Outline

1. Introduction
2. Requirements
3. Design
4. Implementation
5. Project Management
6. Conclusion

Outline

1. Introduction
2. Requirements
3. Design
4. Implementation
5. Project Management
6. Conclusion

Problem & Motivation

Why does this product need to exist?

- **Problem:** one sentence describing the pain point

Problem & Motivation

Why does this product need to exist?

- **Problem:** one sentence describing the pain point
- **Who suffers:** students, associations, university staff

Problem & Motivation

Why does this product need to exist?

- **Problem:** one sentence describing the pain point
- **Who suffers:** students, associations, university staff
- **Today:** how it is handled now and why that fails
  - paper forms, scattered messenger groups
  - no tracking, no history

Problem & Motivation

Why does this product need to exist?

- **Problem:** one sentence describing the pain point
- **Who suffers:** students, associations, university staff
- **Today:** how it is handled now and why that fails
  - paper forms, scattered messenger groups
  - no tracking, no history
- **Our solution:** **Farnama** — one platform for all of it

Product Vision

Vision Statement

For *target users* who *need X*, Farnama is a *product category* that *key benefit*. Unlike *current alternative*, our product *differentiator*.

In Scope

Association management, event requests, elections, notifications.

Out of Scope

Payments, iOS app (in this version).

Outline

1. Introduction
2. Requirements
3. Design
4. Implementation
5. Project Management
6. Conclusion

Functional vs. Non-Functional Requirements

Functional

- FR1 — user registration & login
- FR2 — submit event request
- FR3 — hold an election
- FR4 — push notifications

Non-Functional

- **Security:** role-based access
- **Performance:** $<$ 1 s response
- **Availability:** 99% uptime
- **Usability:** Persian RTL UI

User Roles & Access Levels

Role	Can do	Platform
Student	View events, vote in elections	App
Secretary	Manage association, submit requests	App
University staff	Approve requests, supervise elections	Web panel
Admin	Everything	Web panel

Outline

1. Introduction
2. Requirements
3. Design
4. Implementation
5. Project Management
6. Conclusion

System Architecture

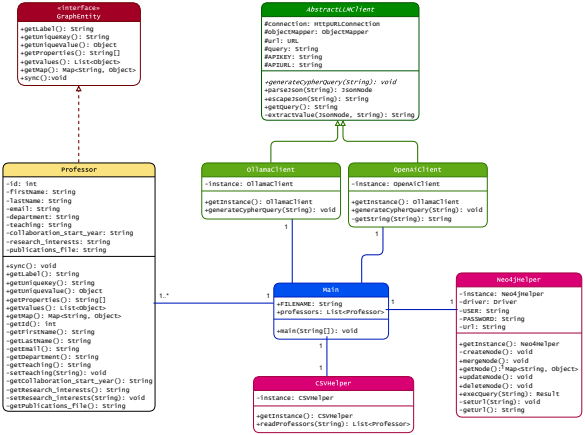

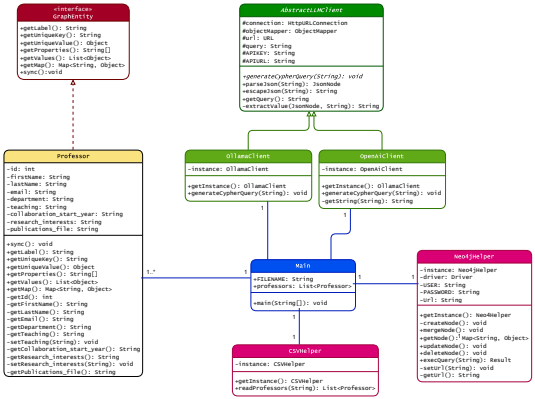

Figure 1: High-level architecture

Class Diagram

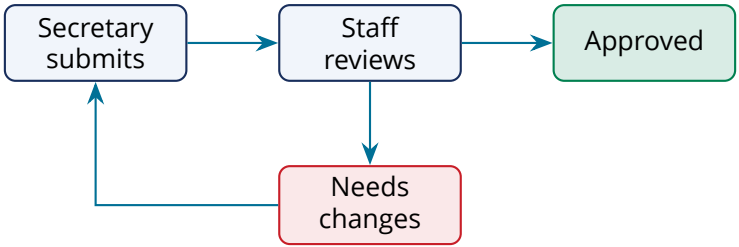

Core entities

- **User** — base class for all roles
- **Association** — has many members
- **Election** — belongs to an association

Request Workflow

Outline

1. Introduction
2. Requirements
3. Design
4. Implementation
5. Project Management
6. Conclusion

Technology Stack

Mobile

Kotlin
Room
Retrofit

Backend

Django
PostgreSQL
REST API

DevOps

Docker Compose
Git / GitHub
CI

API Example

POST /api/requests/

Request

```
{
  "title": "Python Workshop",
  "association_id": 12,
  "date": "2026-12-01",
  "capacity": 40
}
```

Response 201 Created

```
{
  "id": 87,
  "status": "pending"
}
```

Outline

1. Introduction
2. Requirements
3. Design
4. Implementation
5. Project Management
6. Conclusion

Team & Responsibilities

Zahra Mirzaei

Android developer

App screens, voting, Room, notifications

Amirmahdi Azizi

Backend developer

PostgreSQL, Django API, auth, elections

Amirhossein Alian

Integration

API contract, Docker, admin panel, docs

Timeline

Proposal
Week 1
Week 3
Requirements
Design
Week 5
Week 7–12
Implementation
Testing
Week 13
Week 15
Delivery

Risks & Mitigation

Risk	Probability	Impact	Mitigation
Team member unavailable	Medium	High	Cross-training, shared docs
API contract changes	High	Medium	Versioned API, early agreement
Deadline pressure	Medium	Medium	MVP first, stretch goals later

Outline

1. Introduction
2. Requirements
3. Design
4. Implementation
5. Project Management
6. Conclusion

Summary

1. First key takeaway
2. Second key takeaway
3. What comes next
